

Cabana Restaurant Bon Marche, Brixton

Boatman
Mechanical Services
Limited

This restaurant is located in the extremely vibrant town of Brixton, within inner South London.

Well known for its vibrant Caribbean markets, Cabana's eccentricity of Brazilian street food lends itself well to the local surroundings.

Shop Front

Boatman Mechanical Services designed the mechanical package to incorporate exposed services within the restaurant seating area giving a raw finish to the ventilation and air conditioning systems.

The kitchen extract ventilation was routed through the Landlords demise utilising fire rated ductwork, rising through six floors before reaching the external plant area which housed a dual fan unit acting as "run and backup" offering Cabana comfort in the event of fan failure.

Case Studies

The exposed theatre kitchen comprised of three canopies including a central island canopy serving the main open flame barbeque grills which is the heart of the kitchen.

Due to the high risk factor with a potential fire break out, an "Ansul" fire suppression system was opted for to offer protection within the ductwork plenum and cooking appliances.
